

# EzAim SoftBite

Comfort in every bite

Capturing accurate dental images can be challenging because of traditional sensor positioning systems causing discomfort and gagging. Pac-Dent's EzAim SoftBite tabs address this with peel-and-stick technology, a cushioned design, shortened height and an increased adhesive base size. These innovations ensure secure sensor placement and significantly reduce patient discomfort.

The cushioned bite tab allows patients to bite harder on a comfortable surface, enhancing the precision of digital imaging. The shortened height ensures patients only feel the holder upon biting, while the increased adhesive base fits any sensor securely inside the mouth.

Incorporating EzAim SoftBite tabs into daily practice improves clinical diagnostics, enhances patient comfort and increases office efficiency. The single-use, disposable design simplifies the imaging process, requiring no extra setup. Improved patient experience leads to better compliance with dental procedures and follow-up visits, benefiting individual patient health and overall practice success.
